

A reliable partner in  
protecting people, plants and  
products.

**For safe keeping.**

**Houweling**  
group

# We are a safe keeper

Houweling Group advises and develops. We are a guarantor of growth and a guardian of quality. We produce packaging that protects products and their environment, or clothing that allows the wearer to work safely. Our services save on fossil fuel raw materials, and our products stimulate plant growth. And we have been doing that since 1925.

## Quality, the environment and safe and healthy work

We are certified: ISO 9001:2015, ISO 14001:2015 and ISO 45001:2018. These norms guarantee that we offer high-quality products and services, protect the environment as far as possible, and optimise our working conditions.

## Corporate Social Responsibility

We are striving towards sustainable growth for future generations. By developing and then selling circular products ourselves, we contribute to retaining valuable raw materials, reducing the use of fossil fuel raw materials and minimising the amount of waste produced. We are also lowering our own environmental impact by employing solar panels and collecting and reusing rainwater.

# Produced from 100% recycled raw materials

Houweling Group has been working for years on improving plastic products and keeping them in circulation. We have the expertise and the machines to produce and supply plastic products made with fully recycled raw materials.

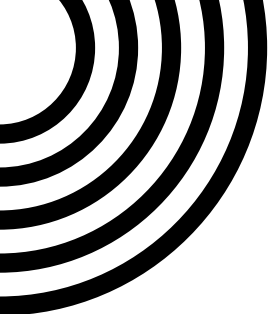

## **Packaging made from PCR and R-HDPE**

A specialised sorting of collected plastic and thorough cleaning and processing leads to the production of recycled pellets. This granulate, available in R-HDPE and R-PP, has the same technical properties as virgin granulate and at a comparable price. With this development we can realise a product made from 100% recycled waste.

## **In-house production of R-HDPE packaging**

Our warehouse in Bleiswijk, the Netherlands is specially designed for the production of packaging made entirely from recycled packaging. Together with you, we can produce an optimal mix required for the production of your plastic packaging. Our range of possibilities extends from 2.5 through 25 litre packaging. Naturally, custom moulds can be considered and fitted into your system. For example, it is now possible to create a 5 litre jerrycan with level line from 100% recycled R-HDPE. We have even produced a jerrycan with Ocean Clean Up raw material. Our sustainable factory works with entirely electric-driven machines. The machines are powered by green electricity, generated by our own solar panels. We heat our office with the residual heat.

**We would be happy to explore with you whether the use of green packaging is possible in your company!**

# Packaging

Our products protect whatever is valuable to you, limit the risks and ensure a safe environment.

## Can packaging

—  
Bottles

—  
Medical waste packaging

—  
Pots

—  
Drums

—  
Containers

—  
Buckets

## Used packaging

—  
Jerrycans

—  
IBC Containers

—  
Crates

—  
Tubs

—  
Palletboxes

# Services

Our services ensure a safe and healthy working environment.

## Respiratory equipment

Test and checking, maintenance and approval of respiratory protection.

## Clothing management

Assembling and managing of personnel clothing and PPE.

## Storage

Flexible storage and value added-services at several locations.

## Personalisation

Design of packaging and personnel clothing in house style.

## Product development

Development of private-label products and unique work clothing.

## Recoservice

Sustainable and circular entrepreneurship is made easier when you use our recoservice. We collect empty used packaging, work clothing and personal protective equipment from your location and ensure the materials are reused or processed.

## Transport

International transport with Euro 6 transporters.

## Water treatment

Measurement, testing and treatment of the water quality for the glasshouse horticultural industry.

Whatever is no longer useful for you in its current form can often still be valuable in another way.

Our recoservice ensures that you will not have to worry about your waste flow.

# For safe keeping.

Houweling Group is a family-run business that protects people, plants and products. We ensure a safe environment, now and in the future.
