# Veri-PACK Online: Pack Label Verification

**Jenton Dimaco** label and data verification systems are used to detect and prevent mis-labelling or the use of the wrong packaging materials. They prevent rejection, repackaging and worst, expensive returns and recalls from customers. The systems check that the artwork is correct and that all pre-printed and over-printed data is also correct such as barcodes, price, weight and allergens.

All label data, verification results and system changes are managed by our Veri-CENTRAL database which links with the factory ERP/MRP and becomes a critical component in the production system.

Veri-PACK Online

# Veri-PACK:
## Pack Label Verification

### Verifies:

• Label placement
• Label identification
• Checks hand applied labels
• Over printed data
• Over printed barcode
• Promotional labels

### The benefits:

• Avoid label mix-ups
• Ensures the data is correct and legible
• Reduces risk of product recall
• Significant QA labour savings
• Eliminates factory produced paperwork
• Prevents poor quality barcodes reaching the checkout
• Electronically archives inspection results
• No costly barcodes required on Promo labels
• No expensive printer interfaces
• Catch weight check independent of weigh price labeller
• Option to save all inspection images (ultimate traceability)
• Interfaces into production management systems

### Label verification

• Verifies

Checks position, rotation and validity of hand applied promo labels
